COMMON SEO ISSUES

Meta Title	✔ The meta title of your page has a length of 74 characters. Most search engines will truncate meta titles to 70 characters. → Top Architects and Interior Designers in Mumbai| 3d Interior Visualization
Meta Description	✔ The meta description of your page has a length of 160 characters. Most search engines will truncate meta descriptions to 160 characters. → Get a 3d interior visualization Solution for your interiors and architecture only at Fifth Dimension who are the Top Architects and Interior Designers in Mumbai
Google Search Results Preview	ⓘ [Top Architects and Interior Designers in Mumbai| 3d Interior Visualization](http://www.fifthdimensionstudio.com) http://www.fifthdimensionstudio.com Get a 3d interior visualization Solution for your interiors and architecture only at Fifth Dimension who are the Top Architects and Interior Designers in Mumbai
Most Common Keywords Test	ⓘ There is likely no optimal keyword density (search engine algorithms have evolved beyond keyword density metrics as a significant ranking factor). It can be useful, however, to note which keywords appear most often on your page and if they reflect the intended topic of your page. More importantly, the keywords on your page should appear within natural sounding and grammatically correct copy. → fifth - 6 times → dimension - 6 times → design - 6 times → incorporate - 6 times → project - 5 times

Keywords Usage Test	❌	Your most common keywords are not appearing in one or more of the meta-tags above. Your primary keywords should appear in your meta-tags to help identify the topic of your webpage to search engines.
		→ Keyword(s) not included in Title tag
		→ Keyword(s) included in Meta-Description tag
		HOW TO FIX KEYWORDS USAGE TEST
		First of all, you must make sure that your page is using the title and meta-description tags. Second, you must adjust these tags content in order to include some of the primary keywords displayed above.

Deprecated HTML Tags	✔	Congratulations! Your page does not use HTML deprecated tags.

Google Analytics Test	✔	Congratulations! Your webpage is using Google Analytics.
Favicon Test	✔	Congratulations! Your website appears to have a favicon. 〝
Backlinks Checker	ⓘ	Your domain has **4 total backlinks** from **4 referring domains**. Some most recently found backlinks for your domain are listed below: → Checked on Aug 27, 2018: https://webdirectory.top/top → Checked on Aug 26, 2018: http://eugendorf.net/upcoming/news/page/8/ → Checked on Aug 24, 2018: http://www.zariaetan.com/ne...ry=News&page=1489&part=year → Checked on Aug 23, 2018: http://www.jodohkita.info/upcoming/News/page/9/
JS Error Checker	✔	Congratulations! There are no severe JavaScript errors on your webpage.
Social Media Check	✔	Congratulations! Your website is connected successfully with social media using: Facebook Twitter

SPEED OPTIMIZATIONS

HTML Page Size Test	✔	Congratulations! The size of your webpage's HTML is **5.34 Kb** and is under the average webpage's HTML size of **33 Kb**. Faster loading websites result in a better user experience, higher conversion rates, and generally better search engine rankings.
HTML Compression/GZIP Test	✔	Congratulations! Your webpage is successfully compressed using **gzip compression** on your code. Your HTML is compressed from **29.94 Kb** to **5.34 Kb** (**82% size savings**). This helps ensure a faster loading webpage and improved user experience.
Site Loading Speed Test	✔	Your website loading time is around **1.96 seconds** and this is under the average loading speed which is **5 seconds**.
Page Objects	✖	Your page has more than **20 http requests**, which can slow down page loading. You can try reducing http requests through various methods such as using text instead of images, using css sprites, using data URIs instead of images, or combining several external files together into one. HTML Pages: 3; CSS Files: 7; Scripts: 12; Images: 10; Flash Files: 0;
Page Cache Test (Server Side Caching)	✔	Congratulations, you have a caching mechanism on your website. Caching helps speed page loading times as well as reduces server load.
Flash Test	✔	Congratulations! Your website does not include flash objects (an outdated technology that was sometimes used to deliver rich multimedia content). Flash content does not work well on mobile devices, and is difficult for crawlers to interpret.
Image Caching Test	✔	Congratulations! Your webpage is using cache headers for your images and the browsers will display these images from the cache.

JavaScript Minification Test	✔	Congratulations! Your website's JavaScript files are minified!
CSS Minification Test	✔	Congratulations! Your website's CSS files are minified!
Nested Tables Test	✔	Congratulations, your page does not use nested tables. This speeds up page loading time and optimizes the user experience.
Frameset Test	✔	Congratulations! Your webpage does not use frames.
Doctype Test	✔	Congratulations! Your website has a doctype declaration: → <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN" "http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
URL Redirects Checker	✔	Congratulations! Your URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).

SERVER AND SECURITY

URL Canonicalization Test	✔	http://www.fifthdimensionstudio.com and http://fifthdimensionstudio.com resolve to the same URL.
HTTPS Test	✖	Your website is not using https, a secure communication protocol. Even for sites that do not collect sensitive customer information, search engines suggest that switching to https is an increasingly good idea and may help improve rankings. Note: if your site relies primarily on adsense income, be aware that using https may be detrimental to ad earnings. **HOW TO FIX HTTPS TEST** If your website needs a secured authentication or an encrypted transfer of data, you need to install an SSL certificate in order to provide a secure connection over HTTPS protocol. HERE is a "step by step" guide to purchase and install an SSL certificate.
Safe Browsing Test	✔	This site is not currently listed as suspicious (no malware or phishing activity found).
Server Signature Test	✔	Congratulations, your server signature is off.
Directory Browsing Test	✔	Congratulations! Your server has disabled directory browsing.
Plaintext Emails Test	✔	Congratulations! Your webpage does not include email addresses in plaintext.

MOBILE USABILITY

Media Query Responsive Test	✔ Congratulations, your website uses media query technique, which is the base for responsive design functionalities.

ADVANCED SEO

Microdata Schema Test	✖ Your webpage doesn't take the advantages of HTML Microdata specifications in order to markup structured data. View Google's guide for getting started with microdata.

HOW TO FIX MICRODATA SCHEMA TEST
HTML5 Microdata is an easy way to add semantic markup to your web pages. Search engines rely on this markup to improve the display of search results, making it easier for people to find the right web pages.
Here is a simple example of how to use HTML5 microdata in your contact web page:

```
<div itemscope itemtype="http://schema.org/Person">
  <span itemprop="name">Joe Doe</span>
  <span itemprop="company">The Example Company</span>
  <span itemprop="tel">604-555-1234</span>
  <a itemprop="email" href="mailto:joe.doe@example.com">joe.doe@example.com</a>
</div>
```

Noindex Checker	✔ Your webpage does not use the noindex meta tag. This means that your webpage will be read and indexed by search engines.
Canonical Tag Checker	✔ Your webpage does not use the canonical link tag.

Nofollow Checker	✔	Your webpage does not use the nofollow meta tag. This means that search engines will crawl all links from your webpage.
Disallow Directive Checker	✔	Your robots.txt file does not use the disallow directive. This means that the whole website can be crawled by search engines.
SPF records checker	✖	Your DNS server is not using an SPF record. SPF (Sender Policy Framework) allows administrators to specify which hosts are allowed to send mail from a given domain by creating a specific SPF record or TXT record in the Domain Name System (DNS). You can find more information about SPF records here.

HOW TO FIX SPF RECORDS CHECKER

An **SPF record** is a type of **Domain Name Service (DNS)** record that allows email systems to check if the sender of a message comes from a legitimate source and refuse an email if the source is not legitimate. Adding an SPF record is as easy as adding CNAME, MX or A records in your DNS zone. You can find more information here.

Before creating the SPF record for your domain, it is important to have access at your domain's DNS zone and to know what mail servers your domain is likely to use and plan how you want any non-authorised email to be handled.

Example:

Let's say that you are planning to send emails using Google Apps and you also want to ensure that no other mail servers are authorised. You can use an SPF record like this:

```
v=spf1 include:_spf.google.com -all
```

"v=spf1" - This sets the SPF version
"include:_spf.google.com" - This includes Google mail servers in your list of authorized sending servers
"-all" - This means that any server not previously listed is not authorized

If you are using your own VPS to send email and not any other service like Mandrill, Google Apps, etc. then you can create an SPF record like this:

```
v=spf1 mx -all
```

Note:

Setting an SPF record for your domain can help in reducing the chances of a spammer using your domain name in unsolicited emails. Research carefully what mail servers your domain is likely to use and plan how you want any non-authorised email to be handled.
